Building a Programmable Logic Controller with a PIC16F648A Microcontroller Murat Uzam

Programmable logic controllers (PLCs) are extensively used in industry to perform automation tasks, with manufacturers offering a variety of PLCs that differ in functions, program memories, and the number of inputs/outputs (I/O). Not surprisingly, the design and implementation of these PLCs have long been a secret of manufacturers. Unveiling the mysteries of PLC technology, **Building a Programmable Logic Controller with PIC16F648A Microcontroller** explains how to design and use a PIC16F648A-microcontroller-based PLC.

The author first described a microcontroller-based implementation of a PLC in a series of articles published in *Electronics World* magazine between 2008 and 2010. This book is based on an improved version of the project, including:

- Updates to the hardware configuration, with a smaller CPU board and two I/O extension boards that now support 16 inputs and 16 outputs instead of 8
- An increased clock frequency of 20 MHz
- Improvements to several macros
- Flowcharts to help you understand the macros (functions)

In this book, the author provides detailed explanations of hardware and software structures. He also describes PIC Assembly macros for all basic PLC functions, which are illustrated with numerous examples and flowcharts. An accompanying CD contains source files (.ASM) and object files (.HEX) for all of the examples in the book. It also supplies printed circuit board (PCB) (Gerber and .pdf) files so that you can have the CPU board and I/O extension boards produced by a PCB manufacturer or produce your own boards.

Making PLCs more easily accessible, this unique book is written for advanced students, practicing engineers, and hobbyists who want to learn how to build their own microcontroller-based PLC. It assumes some previous knowledge of digital logic design, microcontrollers, and PLCs, as well as familiarity with the PIC16F series of microcontrollers and writing programs using PIC Assembly language within an MPLAB integrated development environment.

From reader reviews:

April Little:

Do you have favorite book? In case you have, what is your favorite's book? Publication is very important thing for us to know everything in the world. Each reserve has different aim as well as goal; it means that book has different type. Some people sense enjoy to spend their a chance to read a book. These are reading whatever they consider because their hobby will be reading a book. Why not the person who don't like reading a book? Sometime, particular person feel need book after they found difficult problem or exercise. Well, probably you will need this Building a Programmable Logic Controller with a PIC16F648A Microcontroller.

Debra Yarbrough:

Precisely why? Because this Building a Programmable Logic Controller with a PIC16F648A Microcontroller is an unordinary book that the inside of the publication waiting for you to snap that but latter it will zap you with the secret this inside. Reading this book next to it was fantastic author who also write the book in such awesome way makes the content inside of easier to understand, entertaining approach but still convey the meaning thoroughly. So , it is good for you for not hesitating having this anymore or you going to regret it. This phenomenal book will give you a lot of gains than the other book get such as help improving your skill and your critical thinking means. So , still want to hold up having that book? If I ended up you I will go to the publication store hurriedly.

Deana Smith:

Do you have something that you prefer such as book? The guide lovers usually prefer to select book like comic, brief story and the biggest the first is novel. Now, why not attempting Building a Programmable Logic Controller with a PIC16F648A Microcontroller that give your satisfaction preference will be satisfied by reading this book. Reading practice all over the world can be said as the means for people to know world far better then how they react in the direction of the world. It can't be stated constantly that reading behavior only for the geeky man or woman but for all of you who wants to end up being success person. So , for all you who want to start examining as your good habit, you are able to pick Building a Programmable Logic Controller with a PIC16F648A Microcontroller become your own personal starter.

John Tovar:

Are you kind of stressful person, only have 10 or even 15 minute in your moment to upgrading your mind talent or thinking skill even analytical thinking? Then you are receiving problem with the book than can satisfy your short time to read it because this all time you only find e-book that need more time to be go through. Building a Programmable Logic Controller with a PIC16F648A Microcontroller can be your answer because it can be read by an individual who have those short time problems.
