A polarised variety is a modern generalization of the notion of a variety in classical algebraic geometry. It consists of a pair: the algebraic variety itself, together with an ample line bundle on it. Using techniques from abstract algebraic geometry that have been developed over recent decades, Professor Fujita develops classification theories of such pairs using invariants that are polarised higher-dimensional versions of the genus of algebraic curves. The heart of the book is the theory of D-genus and sectional genus developed by the author, but numerous related topics are discussed or surveyed. Proofs are given in full in the central part of the development, but background and technical results are sometimes just sketched when the details are not essential for understanding the key ideas. Readers are assumed to have some background in algebraic geometry, including sheaf cohomology, and for them this work will provide an illustration of the power of modern abstract techniques applied to concrete geometric problems. Thus the book helps the reader not only to understand about classical objects but also modern methods, and so it will be useful not only for experts but also non-specialists and graduate students.

From reader reviews:

Alla Haynes:

Playing with family within a park, coming to see the sea world or hanging out with good friends is thing that usually you may have done when you have spare time, subsequently why you don't try factor that really opposite from that. Just one activity that make you not feeling tired but still relaxing, trilling like on roller coaster you have been ride on and with addition associated with. Even you love Classification Theory of Polarized Varieties (London Mathematical Society Lecture Note Series), it is possible to enjoy both. It is very good combination right, you still wish to miss it? What kind of hang-out type is it? Oh come on its mind hangout men. What? Still don't get it, oh come on its referred to as reading friends.

Brandi Huff:

Don't be worry should you be afraid that this book will certainly filled the space in your house, you could have it in e-book approach, more simple and reachable. This Classification Theory of Polarized Varieties (London Mathematical Society Lecture Note Series) can give you a lot of pals because by you taking a look at this one book you have point that they don't and make an individual more like an interesting person. This particular book can be one of one step for you to get success. This book offer you information that perhaps your friend doesn't recognize, by knowing more than additional make you to be great individuals. So , why hesitate? We need to have Classification Theory of Polarized Varieties (London Mathematical Society Lecture Note Series).

William Walker:

As we know that book is important thing to add our know-how for everything. By a reserve we can know everything we want. A book is a set of written, printed, illustrated or perhaps blank sheet. Every year seemed to be exactly added. This book Classification Theory of Polarized Varieties (London Mathematical Society Lecture Note Series) was filled in relation to science. Spend your extra time to add your knowledge about your technology competence. Some people has different feel when they reading some sort of book. If you know how big selling point of a book, you can feel enjoy to read a reserve. In the modern era like now, many ways to get book that you wanted.

Suanne Barnwell:

That guide can make you to feel relax. This particular book Classification Theory of Polarized Varieties (London Mathematical Society Lecture Note Series) was colorful and of course has pictures on there. As we know that book Classification Theory of Polarized Varieties (London Mathematical Society Lecture Note Series) has many kinds or variety. Start from kids until youngsters. For example Naruto or Investigation company Conan you can read and believe that you are the character on there. Therefore not at all of book tend to be make you bored, any it makes you feel happy, fun and rest. Try to choose the best book for you and try to like reading that will.
